

FORMS AUTOMATION FOR THE CONSTRUCTION INDUSTRY

Field2base's award winning field automation software provides the ultimate mobility solution for commercial, industrial, and residential construction companies who want to automate the way they collect and process information from their construction site(s).

Maintaining construction site information on loose paper forms is an administrative headache. It creates time delays, allows for costly errors and requires multiple steps to process. Today's economy demands that construction firms do more with less. The easiest way to increase the bottom line without hiring more staff is to reduce the significant overhead costs associated with managing paper forms in the field.

- ✓ Digitize your existing daily forms such as time sheets, change orders, safety inspections, and more.
- ✓ Same "Pen and Paper" feel makes the solution easy to use.
- ✓ Capture enhanced work order data such as photographs, barcodes, signatures, and more.
- ✓ Send captured data immediately to an email address, a web hosted database or your back office system using LAN, Wi-Fi, or Broadband Cellular.
- ✓ Instantly process credit card and check payments at the customers location.
- ✓ Capture GPS data for work order verification and route management.

The screenshot displays the 'ACME ROOFING CO.' mobile application interface. At the top, it shows 'JOB TICKET' and 'Work Order No. 1234-A'. The main form area is divided into sections: 'ROOF DRAWING' with a grid and handwritten notes like '450 Pitch' and '3/4" Gap in right soffit'; 'Leak 1 Description' with a calendar for January 2010; 'Leak 2 Description and Photo' with a photo of a roof and the text 'Constant exposure to water has rotted soffit'; and a 'Roof Type' section with checkboxes for BUR, Mod Bit, EPDM, PVC, Metal, and Steep. A 'Send Form' button is visible at the bottom right. A vertical 'Forms' menu is on the right side of the screen.
