

FORMS AUTOMATION FOR ENGINEERING PROFESSIONALS

Field2base's award winning field automation software provides the ultimate mobility solution for field engineers and architects who want to automate the way they collect and process detailed information in the field.

Maintaining technical site information on loose paper forms is an administrative headache. It creates time delays, allows for costly errors and requires multiple steps to process. Today's economy demands that engineering and architectural firms do more with less. The easiest way to increase the bottom line without hiring more staff is to reduce the significant overhead costs associated with managing paper forms in the field.

- ✓ Digitize your existing daily forms such as soil samples, boring logs, structural integrity, and other general engineering field sciences.
- ✓ Same "Pen and Paper" feel makes the solution easy to use.
- ✓ Capture enhanced engineering data such as photographs, GPS, technical drawings, barcodes, CAD, signatures, and more.
- ✓ Embed mathematical equations and robust form logic to ensure data is 100% accurate.
- ✓ Send captured data immediately to an email address, a web hosted database or your back office system using LAN, Wi-Fi, or Broadband Cellular.

The screenshot shows a mobile application interface for a 'CONSTRUCTION FIELD REPORT'. At the top, there's a header with 'Boring Site 315' and 'CONSTRUCTION FIELD REPORT'. Below this, there are fields for 'PROJECT: Boring Site 315', 'FIELD REPORT NO: 298', 'CONTRACTOR: Alb. Contractor', and 'ARCHITECT'S PROJECT NO: 314 A'. The interface includes a date and time selector, a weather and temperature range dropdown, and a calendar for February 2010. A photograph of a boring log is visible in the 'OBSERVATIONS' section. A 'GPS Verified' box shows coordinates -98.63 and 33.4. There's also a grid with handwritten notes and a 'Send Form' button on the right sidebar.
