

## FORMS AUTOMATION FOR PUBLIC SAFETY PROFESSIONALS

Field2base's award winning field automation software is helping to modernize the way public safety professionals investigate and report field incidents.

Many law enforcement agencies have adopted very sophisticated and expensive Record Management Systems (RMS) but continue to populate these systems with the same paper based process used decades ago. Field information is taking weeks to be processed and is riddled with clerical errors and omissions. The availability of real time, accurate and pertinent information is paramount to any law enforcement agency's ability to protect and serve the public.

- ✓ Convert your existing paper forms into a digital format with limited end user training.
- ✓ Secure your inspection data with 256 bit AES encryption.
- ✓ Capture enhanced work order data such as photographs, barcodes (i.e. on Ankle Monitoring Bracelets), signatures, and more.
- ✓ Send captured data immediately to an email address, a web hosted database or your back office system using LAN, Wi-Fi, or Broadband Cellular.
- ✓ Capture GPS information.

To learn more about our mobile data collection solutions and see a demonstration of how your paper forms can be automated, contact one of our Sales Executives today.
